

Definition	Percentage of the eligible population (those between the ages of 40 and 74, who have not already been diagnosed with heart disease, stroke, diabetes, kidney disease and certain types of dementia) receiving an NHS Health Check in the relevant time period.	How this indicator works	Everyone between the ages of 40 and 74, who has not already been diagnosed with one of these conditions is invited (once every five years) to have a check to assess their risk of heart disease, stroke, kidney disease and diabetes and afterwards given support and advice to help them reduce or manage that risk. The national targets are 20% of eligible population should be offered a health check and 75% of those offered should receive a check.
What good looks like	For the received percentage to be as high as possible and to be above target.	Why this indicator is important	The NHS Health Check programme aims to help prevent heart disease, stroke, diabetes, and kidney disease.
History with this indicator	2011/12: 12.4% received. 2012/13: 10.0% received		

	Q1	Q2	Q3	Q4
Target	3.75%	3.75%	3.75%	3.75%
Received 12/13	2.1%	2.0%	2.9%	3.0%
Received 13/14	1.9%	3.5%		

Performance Overview	10 practices have met their quarterly targets in total and 6 practices have performed more health checks than in previous months since the payment increase from £20 per health check to £35, this may increase during October due to practices not being completely aware of the payment increase until late September.	Actions to sustain or improve performance	Seven practices are under performing and steps are in place to assist them. The remaining practices are performing health checks but are falling slightly below their quarterly quotas.
RAG Rating			
Benchmarking	In 2011/12, only 12.4% received health checks, which was less than the set target of 13.7%. In 2012/13, only 10.0% received health checks against the target of 15%.
